THE FILTER PUMP

EP016 - 3.0kW

24 lpm - 70 bar

An All-in-One High Pressure Filter Pump

The EP consolidates all components of a conventional coolant system: Fine or suction filters are not required. As a result, the EP Filter Pump saves space and only requires a fraction of the volume occupied by a conventional coolant system. The space saved can be used to improve production performance and efficiency.

- Maximum operating pressure: 70 bar
- Maximum flow rate: 24 lpm
- No suction filter required
- No inline filter required
- No clean tank required
- No transfer pump required
- Integral pressure relief valve
- Lower energy consumption
- Available for variable high pressure duties

20μ

* Excludes
Germany
& Italy

Turbulence™ Filter

Special turbulence design cleans the filter automatically resulting in a maintenance free unit

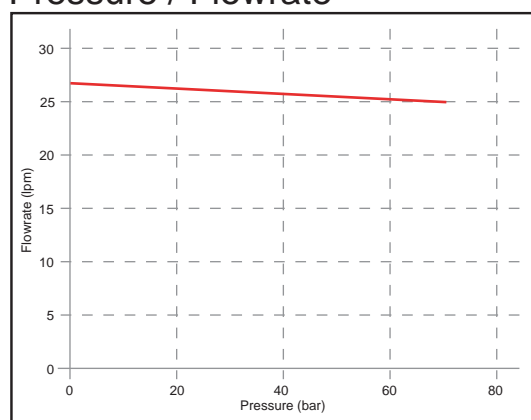

High Efficiency Plunger Pump

Plunger movement produces high pressure coolant

Pressure / Flowrate

Required Power
